

A fully integrated **Personnel on Site (POS)** and **Automated Muster** System for offshore and onshore operations. **Configured to your site.**

- ✓ Instant visibility of all personnel on site
- ✓ Reduced risk during emergency mustering
- ✓ Improved operational efficiency
- ✓ Scalable across multiple sites

FROM ARRIVAL TO ACCOUNTABILITY

ACMS In Action

Power Plant / Accommodation Vessel

✓ Crew Change & Onboard Logistics

During crew rotations, entire manifests are checked in and updated in just a few clicks, with personnel automatically assigned to bunks, duties, and muster stations — even when changes happen offshore.

✓ Training & Certification Control

Operators can instantly identify who is qualified, who is missing training, and whose certifications are expiring — using live POB data instead of manual spreadsheets.

✓ Live POB & Muster Visibility

On offshore accommodation vessels, ACMS provides a real-time view of exactly who is on board, updating instantly as personnel move between vessel and platform — enabling faster, more accurate muster response.

✓ System Reliability (WatchDog)

In remote offshore environments, WatchDog continuously monitors system and network performance — detecting issues early to ensure ACMS remains fully operational.

WatchDog System Monitoring

Continuously monitors ACMS network and system performance — detecting issues before they impact operations.

- Real-time fault and network disruption detection
- Proactive alerts to prevent downtime
- Built for offshore and remote environments

Because your safety system should never go offline.

Why Operators Choose ACMS

Non-proprietary hardware

Built to extreme environments

(NEMA, IECEx)

Multi-mode registration

(Pin, Barcode, RFID, Biometrics)

Fully web-based, accessible anywhere

Optional end-user installation

Scalable across multi-site operations

Multi-lingual interface
