

MateSaver Recovery System

MateSaver is a purpose-designed man overboard recovery system that enables the rapid retrieval of conscious or unconscious casualties from the water. Designed for demanding marine environments, MateSaver supports safe recovery operations aboard commercial vessels, pilot boats, workboats, rescue crafts and offshore installations.

SPECIFICATIONS

Weight

6 kg

Minimum Breaking Load

1,500 kg

Safe Working Load

150 kg

Standard Lengths

2.6 m / 3.6 m

Inspection

Every 6 months & after use

Recommended Lifespan

5 years

WHY CHOOSE MATESAVER?

Rapid casualty recovery - Enables the safe recovery of conscious or unconscious persons from the water.

Single-person operation - Designed to allow one crew member to conduct the recovery while remaining safely onboard.

Minimal setup - Ready for rapid deployment in emergency situations.

Proven performance - Successfully used in real-world rescue operations.

Commercial marine design - Build for demanding marine environments.

Low maintenance - Simple inspection routine and five-year recommended service life.

GUIDANCE RECOVERY PROCEDURE

The following procedure provides a general guide to recovering a casualty from the water using the MateSaver. The exact recovery method will depend on the vessel, available lifting equipment and the casualty's condition. Operators should always follow their vessel's approved man overboard procedures and receive appropriate training.

RECOVERY STEPS

1. Locate the casualty - Maintain visual contact and maneuver the vessel to a safe recovery position.
2. Prepare the MateSaver - Retrieve the MateSaver and secure yourself in accordance with your vessel's safety procedures.
3. Deploy the recovery loop - Position the loop over the casualty, passing it from the feet upwards where possible.
4. Secure the casualty - Tighten the loop so the casualty is safely supported for recovery.
5. Recover alongside - Bring the casualty carefully to the designated recovery point.
6. Attach lifting equipment - Connect the lifting tackle to the designated lifting point on the MateSaver.
7. Lift the casualty aboard - Recover the casualty safely onto the vessel using appropriate lifting equipment.
8. Provide immediate care - Begin first aid and follow onboard emergency procedures.

Available by Request: MateSaver Hoist System

To assist with recovering casualties, the MateSaver is available with a lightweight block and tackle hoist system designed to provide a safe and controlled lifting solution.

Available options:

- 2 meter Block & Tackle (Suitable for 2.6m Pole)
- 5 meter Block & Tackle (Suitable for 3.6m Pole)
